

Executive summary: Loopcard

CryptoBook **social is out**. An MCP gateway / Slip / quantum classroom is still **NO-GO**. The idea we boom on social media is **Loopcard** — a shareable bill card for coding agents. Buy a new domain (**loopcard.ai** / .app). Preview is live at <https://cryptobook.space>.

What we kill

Slip, Hallpass, hosted MCP/LLM proxies, Langfuse clones, quantum-on-this-VPS, fake “AI Act certified,” and a second crypto social network. Permit.io already is the gateway. IBM already gives away real QPUs. Okta Agent SSO is \$0 extra (GA 24 Aug 2026).

What we boom

Loopcard: one click shows a re-creation of the published ~\$6,000 Claude Code overnight. Optional CSV is parsed **in the browser** — no API keys, no upload. Download a PNG. Post it. That is the growth unit.

Why it can travel on socials

Signal	Number	Use
Overnight Claude story	\$6,000	Hero card (labeled as reporting)
Cursor month on HN	\$1,263	Pain is real; they shipped OSS
Median agentic /dev / mo	\$480	Many teams have a smaller version
Old CryptoBook traffic	~65 IPs / week	Why we change the domain
Cursor Pro / Claude Pro	\$20	Where people already pay

Documents

Full pack: **/root/cryptobook-next/docs/** — business plan, market study, competitive map, financials, marketing, website spec, brand, legal, ops, social launch kit (X / LinkedIn / Reddit / PH / TikTok), Word + PowerPoint in docs/exports/.

Operator next: (1) register the new domain → A 173.249.19.205 (2) post the kit with the card PNG (3) do not add API-key fields (4) do not charge until a pricing page says so.

Not legal advice. Not an offer of securities. Not a compliance certification.
